

# The Homotopy Groups of $K(\mathbb{S})$

Michael A. Mandell

Indiana University

UIUC Topology Seminar

April 1, 2015

# Overview

Rognes calculated the homotopy groups of  $K(\mathbb{S})$  at regular primes.  
What happens at irregular primes?

- Joint work with Andrew Blumberg
- Preprint [arXiv:1408.0133](https://arxiv.org/abs/1408.0133)

- 3  $K$ -theory and étale cohomology
- 4 Main theorem (reprise)

# Waldhausen's Algebraic $K$ -Theory of Spaces

Algebraic  $K$ -theory of spaces ties algebraic  $K$ -theory to differential and PL topology:

- $A(X) \simeq K(\mathbb{S}[X])$
- Smooth Whitehead space:  $\Omega^\infty A(X) \simeq Q_+(X) \times Wh^{\text{Diff}}(X)$
- Smooth stable concordance space:  $\Omega Wh^{\text{Diff}}(X) \simeq \mathcal{C}^{\text{Diff}}(X)$

$$\mathcal{C}^{\text{Diff}}(X) = \text{colim}(C(X) \rightarrow C(X \times I) \rightarrow C(X \times I^2) \rightarrow \dots)$$

- PL Whitehead space and PL stable concordance space

$$\Omega^\infty(K(\mathbb{S}) \wedge X_+) \rightarrow \Omega^\infty(A(X)) \rightarrow Wh^{\text{PL}}(X)$$

$$\Omega^2 \Omega^\infty(\tilde{K}(\mathbb{S}) \wedge X_+) \rightarrow \mathcal{C}^{\text{Diff}}(X) \rightarrow \mathcal{C}^{\text{PL}}(X)$$

# Waldhausen's Algebraic $K$ -Theory of Spaces

Algebraic  $K$ -theory of spaces ties algebraic  $K$ -theory to differential and PL topology:

$$\bullet \underline{A}(X) \simeq K(\underline{S}[X])$$

$$\pi_0 K(\mathcal{S}[\Omega X]) \simeq K_0(\mathbb{Z}[\pi_1 X])$$

$$K_0 \quad GL_n(\mathcal{S}[\Omega X])^+$$

$$\bullet \text{ Smooth Whitehead space: } \Omega^\infty A(X) \simeq Q_+(X) \times Wh^{\text{Diff}}(X)$$

$$\bullet \text{ Smooth stable concordance space: } \Omega Wh^{\text{Diff}}(X) \simeq \mathcal{C}^{\text{Diff}}(X)$$

$$\mathcal{C}^{\text{Diff}}(X) = \text{colim}(C(X) \rightarrow C(X \times I) \rightarrow C(X \times I^2) \rightarrow \dots)$$

$$\bullet \text{ PL Whitehead space and PL stable concordance space}$$

$$\Omega^\infty(K(\mathbb{S}) \wedge X_+) \rightarrow \Omega^\infty(A(X)) \rightarrow Wh^{\text{PL}}(X)$$

$$\Omega^2 \Omega^\infty(\tilde{K}(\mathbb{S}) \wedge X_+) \rightarrow \mathcal{C}^{\text{Diff}}(X) \rightarrow \mathcal{C}^{\text{PL}}(X)$$

# Waldhausen's Algebraic $K$ -Theory of Spaces

Algebraic  $K$ -theory of spaces ties algebraic  $K$ -theory to differential and PL topology:

- $A(X) \simeq K(\mathbb{S}[X])$
- Smooth Whitehead space:  $\Omega^\infty A(X) \simeq Q_+(X) \times Wh^{\text{Diff}}(X)$

# Waldhausen's Algebraic $K$ -Theory of Spaces

Algebraic  $K$ -theory of spaces ties algebraic  $K$ -theory to differential and PL topology:

- $A(X) \simeq K(\mathbb{S}[X])$   $A(*) \simeq K(\mathbb{S})$
- Smooth Whitehead space:  $\Omega^\infty A(X) \simeq Q_+(X) \times Wh^{\text{Diff}}(X)$
- Smooth stable concordance space:  $\Omega Wh^{\text{Diff}}(X) \simeq \mathcal{C}^{\text{Diff}}(X)$

$$\mathcal{C}^{\text{Diff}}(X) = \text{colim}(C(X) \rightarrow C(X \times I) \rightarrow C(X \times I^2) \rightarrow \dots)$$

- PL Whitehead space and PL stable concordance space

$$\begin{aligned} \Omega^\infty(K(\mathbb{S}) \wedge X_+) &\rightarrow \Omega^\infty(A(X)) \rightarrow Wh^{\text{PL}}(X) \\ \Omega^2 \Omega^\infty(K(\mathbb{S}) \wedge X_+) &\rightarrow \mathcal{C}^{\text{Diff}}(X) \rightarrow \mathcal{C}^{\text{PL}}(X) \end{aligned}$$

# Linearization Map

map of ring spectra

$$\text{Linearization map: } \mathbb{S} \longrightarrow \mathbb{Z}$$

# Linearization Map

$K(-)$  is functorial in maps of ring spectra

$$\text{Linearization map: } \mathbb{S} \longrightarrow \mathbb{Z}$$

$$K(\mathbb{S}) \longrightarrow K(\mathbb{Z})$$

Theorem (Waldhausen)

*The linearization map  $K(\mathbb{S}) \rightarrow K(\mathbb{Z})$  is a rational equivalence.*

# Linearization Map

$K(-)$  is functorial in maps of ring spectra

$$\begin{array}{c} \mathbb{Q} \\ \downarrow \\ \mathbb{Z} \\ \downarrow \\ \mathbb{Q} \\ \downarrow \\ \mathbb{Z} \\ \downarrow \\ \mathbb{Q} \\ \downarrow \\ \mathbb{Z} \\ \downarrow \\ \mathbb{Q} \\ \downarrow \\ \mathbb{Z} \end{array}$$

Linearization map:  $\mathbb{S} \longrightarrow \mathbb{Z}$

$$K(\mathbb{S}) \longrightarrow K(\mathbb{Z})$$

Borel  
computed

$$\pi_* (K(\mathbb{Z}) \otimes \mathbb{Q}) = \begin{cases} \mathbb{Q} & * = 0 \\ \mathbb{Q} & * \equiv 1 \pmod{4} \\ 0 & \text{otherwise } * \neq 1 \end{cases}$$

## Theorem (Waldhausen)

The linearization map  $K(\mathbb{S}) \rightarrow K(\mathbb{Z})$  is a rational equivalence.

# Linearization Map

$K(-)$  is functorial in maps of ring spectra

$$\text{Linearization map: } \mathbb{S} \longrightarrow \mathbb{Z}$$

$$K(\mathbb{S}) \longrightarrow K(\mathbb{Z})$$

# Linearization / Cyclotomic Trace Square

$K(-)$  is functorial in maps of ring spectra

$$\text{Linearization map: } \mathbb{S} \longrightarrow \mathbb{Z}$$

$$K(\mathbb{S}) \longrightarrow K(\mathbb{Z})$$

$$TC(\mathbb{S}) \longrightarrow TC(\mathbb{Z})$$

defined using  
equivariant  
stable  
homotopy  
theory

Topological cyclic homology  $TC$

Theorem (Dundas)

*The linearization/cyclotomic trace square becomes homotopy cartesian after  $p$ -completion.*

# Linearization / Cyclotomic Trace Square

$K(-)$  is functorial in maps of ring spectra

Linearization map:  $\mathbb{S} \longrightarrow \mathbb{Z}$

$$\begin{array}{ccc}
 & K & K(\mathbb{S}) \longrightarrow K(\mathbb{Z}) \\
 \text{cyclotomic} & \downarrow & \downarrow \qquad \qquad \downarrow \\
 \text{trace} & TC & TC(\mathbb{S}) \longrightarrow TC(\mathbb{Z})
 \end{array}$$

Topological cyclic homology  $TC$

Theorem (Dundas)

*The linearization/cyclotomic trace square becomes homotopy cartesian after  $p$ -completion.*

# Linearization / Cyclotomic Trace Square

$K(-)$  is functorial in maps of ring spectra

Linearization map:  $\mathbb{S} \longrightarrow \mathbb{Z}$

$$\begin{array}{ccc}
 & K & K(\mathbb{S}) \longrightarrow K(\mathbb{Z}) \\
 \text{cyclotomic} & \downarrow & \downarrow \qquad \qquad \downarrow \\
 \text{trace} & TC & TC(\mathbb{S}) \longrightarrow TC(\mathbb{Z})
 \end{array}$$

Topological cyclic homology  $TC$

## Theorem (Dundas)

*The linearization/cyclotomic trace square becomes homotopy cartesian after  $p$ -completion.*

# Main Theorem

## Theorem (Dundas)

*The linearization/cyclotomic trace square becomes homotopy cartesian after  $p$ -completion.*

$$\begin{array}{ccc}
 K(\mathbb{S}) & \longrightarrow & K(\mathbb{Z}) \\
 \downarrow & & \downarrow \\
 TC(\mathbb{S}) & \longrightarrow & TC(\mathbb{Z})
 \end{array}$$

Consequence: Long exact sequence

$$\cdots \rightarrow \pi_n K(\mathbb{S})_p^\wedge \rightarrow \pi_n K(\mathbb{Z})_p^\wedge \oplus \pi_n (TC(\mathbb{S})_p^\wedge) \rightarrow \pi_n (TC(\mathbb{Z})_p^\wedge) \rightarrow \pi_{n-1} K(\mathbb{S})_p^\wedge \rightarrow \cdots$$

## Theorem (Main Theorem)

*The sequence  $\pi_n K(\mathbb{S})_p^\wedge \rightarrow \pi_n K(\mathbb{Z})_p^\wedge \oplus \pi_n (TC(\mathbb{S})_p^\wedge) \rightarrow \pi_n (TC(\mathbb{Z})_p^\wedge)$  is split short exact. ( $p > 2$ )*

Corollary:  $p$ -torsion is split short exact.

# Main Theorem

## Theorem (Dundas)

*The linearization/cyclotomic trace square becomes homotopy cartesian after  $p$ -completion.*

$$\begin{array}{ccc}

# Multiplication on $\pi_* K(\mathbb{S})$ is Nilpotent

Suffices to consider rational part,  $p$ -torsion separately

Rational part is in odd degrees

Saw  $K(\mathbb{Z})_p^\wedge \rightarrow TC(\mathbb{Z})_p^\wedge$  is surjective on  $\pi_n$  for  $n \equiv 1 \pmod{2p-2}$ .

Implies  $\pi_n K(\mathbb{Z}) = 0$  for  $n \equiv 0 \pmod{2p-2}$  (Poitou-Tate).

Implies  $\pi_n \text{hofib}(trc) = 0$  for  $n \equiv 0 \pmod{2p-2}$ .

Also for  $p = 2$ ,  $\pi_n \text{hofib}(trc) = 0$  for  $n \equiv 0 \pmod{8}$ .

So  $K(\mathbb{S})_p^\wedge \rightarrow TC(\mathbb{S})_p^\wedge$  injective on  $\pi_n$  for  $n \equiv 0 \pmod{8p-8}$ .

Suffices to see  $\pi_* TC(\mathbb{S})_p^\wedge$  is nilpotent.

$$TC(\mathbb{S})_p^\wedge \simeq \mathbb{S}_p^\wedge \vee \Sigma CP_{-1}^\infty$$
